Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, drawn to a valve prosthesis, classified in class 623, subclass 2.14.
- II. Claims 9-12, drawn to a balloon catheter, apparently in combination with a valve prosthesis, classified in class 623, subclass 2.11.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because features such as the commissural points (claim 1, line 3) are not set forth in the body of claim 9. The subcombination has separate utility such as with a constraining cylinder (in the case where the elastical stent is self-expanding) or with a mechanical (non-inflating) device for expanding the stent.

Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the

currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
